

simplex Collector is the Digital Asset Manager of the *simplex Platform*.

simplex Collector combines the advantages of a secure DAM and collaborative open tools. Simply upload your assets – videos, photos, audios and documents – in any format and sort it with a few clicks into themes and collections. Share a single asset or a full collection across your channels, internally or to public.

Collections can be private or public, depending on the purpose of use. Different user rights levels make sure only reviewed and proofed versions are shared. Is there another version of your asset such as second language or low resolution, simply evolve an alternative file and find it related to the original. Videos uploaded to the *simplex Collector* can be published automatically by presets. The extensive search function helps you to find assets by metadata used with upload.

simplex Collector is a web solution and available as a public cloud, private cloud or on-premise version. Customized to your needs it has no limited capacities (or no boundaries) in users, bandwidth or storage.

Key Features

All together

Forget about browsing your entire file database for hours to find all related assets. Videos, Photos, Audios, Documents - *simplex Collector* takes them all. Simply upload your asset in any format and relate it to a theme. Select metadata from a predefined list for a fast and accurate search performance. Share it inside your group or make it public. And because you ask for it: Yes, it is secure.

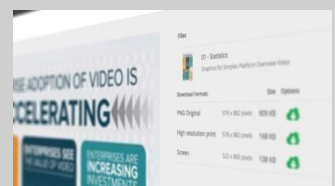

Themes

To manage your own *simplex Collector*, create themes your assets will be sorted in. Themes will show assets you were not specifically looking for, such as news, marketing stuff or documents created by human resources. Themes can just be everything – you name it. Breaking the folder structure, everything related to a file is just next to it.

Collections

Collections can be created by anyone. Select the desired assets and collect them in a basket. Use it as your private collection or share it with your co-workers or clients. If you created something new, upload and relate it to an existing collection. Some assets are not free to use? Not a big deal. To send a request to the owner takes you one click.

Alternative Files

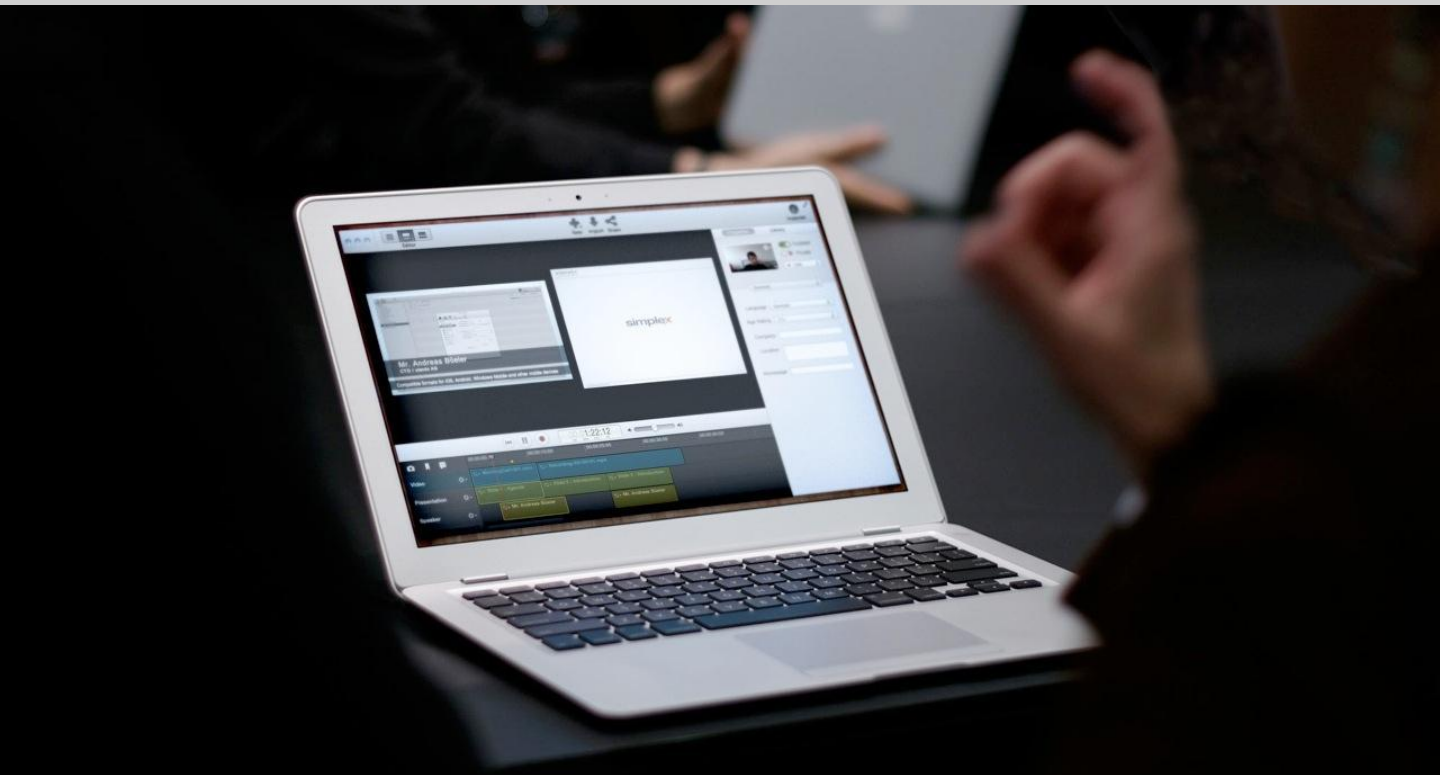

We all know the time consuming struggle searching for the correct version. *simplex Collector* offers you alternative files. Whether you use multiple languages, various resolutions or different format of an asset, having the source file and all alternative version from it shows you the full variety of a file. Invite all your team members to share their favorites for easy collaboration.

How it will help you

With *simplex Collector*, your digital assets are in shape. Search, and find not only results, but different versions of it. Provide your team with videos, photos and documents, and invite them to select their favorites to a private collection. Or ask them to upload their version of a file, and share it with everyone you want. Because collaboration is – *simplex*.

Just use it
